

# Winning Poker Hands

## Royal Flush

Five card sequence from 10 to the Ace in the same suit (10,J,Q,K,A).

## Straight

Five cards in sequence, but not in the same suit. The higher straight wins if two or more people have a straight.

In case of straights that tie, the pot is split.

## Straight Flush

Any five card sequence in the same suit. (eg. 8,9,10,J,Q and A, 2,3,4,5 of same suit).

All the cards are of the same

suit, and all are consecutive. Ranking between straights is determined by the value of the high end of the straight.

## Three of a kind

Three cards of the same value. The highest set of three cards wins.

## Four of a kind

All four cards of the same index (eg. J,J,J,J).

## Two Pair

Two separate pairs (eg. 4,4,Q,Q). The pair with the higher value is used to determine the winner of a tie.

## Full House

Three of a kind combined with a pair (eg. A,A,A,5,5).

Ties on a full house are broken by the three of a kind,

as you cannot have two equal sets of three of a kind in any single deck.

## Pair

One pair of two equal value cards constitutes a pair.

## Flush

Any five cards of the same suit, but not in sequence.

Don't be tricked into thinking that all five cards are the same color. The high card determines the winner if two or more people have a flush.

## High Card

If no one has any of the above winning hands, the tie is determined by the highest value card in the hand. If the

highest cards are a tie then the tie is broken by the second highest card. Suits are not used to break ties.
