A Regular Expressions Summary

Creating:

Standard regex literal	/ / <options></options>
Extended regex literal	%r{ } <options></options>
Formal constructor	Regex.new(' ', 'options')

Regex Options:

i	Case insensitive pattern matching. Default is case sensitive.
0	Substitute once only. ???
m	Multi-line mode: The special key "." now also matches newlines.
X	Extended mode: Spaces/newlines allowed to increase readability.
neus	Character encoding: One of None, EUC, UTF-8, SJIS. The default encoding is the same as the source encoding.

Special Keys:

Any character except a newline (unless in mode m). The beginning of the line or string The ending of the line or string The ending of the line or string A "A", "/", ".", "A", or "\$" character The beginning of the string. A word boundary (outside of [] only) B Not a word boundary A digit (0 through 9). D Not a digit A hex digit (0 through 9, a through f, and A through F). H Not a hex digit A white space character (including spaces, tabs, newlines, carriage returns, and form feeds). S Not a white space character. A word ("C" identifier) character. W Not a word character. The end of the string. The end of the string or line.		
\$ The ending of the line or string \\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\	•	Any character except a newline (unless in mode m).
\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \	^	The beginning of the line or string
The beginning of the string. A word boundary (outside of [] only) Not a word boundary A digit (0 through 9). Not a digit A hex digit (0 through 9, a through f, and A through F). H Not a hex digit A white space character (including spaces, tabs, newlines, carriage returns, and form feeds). Not a white space character. A word ("C" identifier) character. W Not a word character. An encoded hexadecimal character value. The end of the string.	\$	The ending of the line or string
A word boundary (outside of [] only) Not a word boundary A digit (0 through 9). Not a digit A hex digit (0 through 9, a through f, and A through F). H Not a hex digit A white space character (including spaces, tabs, newlines, carriage returns, and form feeds). Not a white space character. A word ("C" identifier) character. Not a word character. An encoded hexadecimal character value. The end of the string.	\\ \/ \. \^ \\$	A "\", "/", ".", "^", or "\$" character
Not a word boundary A digit (0 through 9). Not a digit A hex digit (0 through 9, a through f, and A through F). H Not a hex digit A white space character (including spaces, tabs, newlines, carriage returns, and form feeds). S Not a white space character. W A word ("C" identifier) character. W Not a word character. An encoded hexadecimal character value. The end of the string.	\A	The beginning of the string.
A digit (0 through 9). Not a digit A hex digit (0 through 9, a through f, and A through F). H Not a hex digit A white space character (including spaces, tabs, newlines, carriage returns, and form feeds). Not a white space character. A word ("C" identifier) character. Not a word character. Not a word character. An encoded hexadecimal character value. The end of the string.	\b	A word boundary (outside of [] only)
Not a digit A hex digit (0 through 9, a through f, and A through F). H Not a hex digit A white space character (including spaces, tabs, newlines, carriage returns, and form feeds). Not a white space character. A word ("C" identifier) character. Not a word character. Not a word character. An encoded hexadecimal character value. The end of the string.	\B	Not a word boundary
A hex digit (0 through 9, a through f, and A through F). Not a hex digit A white space character (including spaces, tabs, newlines, carriage returns, and form feeds). Not a white space character. A word ("C" identifier) character. Not a word character. Not a word character. An encoded hexadecimal character value. The end of the string.	\d	A digit (0 through 9).
Not a hex digit A white space character (including spaces, tabs, newlines, carriage returns, and form feeds). Not a white space character. A word ("C" identifier) character. Not a word character. Not a word character. An encoded hexadecimal character value. The end of the string.	\D	Not a digit
A white space character (including spaces, tabs, newlines, carriage returns, and form feeds). Not a white space character. A word ("C" identifier) character. Not a word character. An encoded hexadecimal character value. The end of the string.	\h	A hex digit (0 through 9, a through f, and A through F).
returns, and form feeds). Not a white space character. W A word ("C" identifier) character. Not a word character. Not a word character. An encoded hexadecimal character value. The end of the string.	\H	Not a hex digit
\w A word ("C" identifier) character. \w Not a word character. \xHH An encoded hexadecimal character value. \z The end of the string.	\s	1
Not a word character. \mathbb{\text{xHH}} An encoded hexadecimal character value. \mathbb{\text{z}} The end of the string.	\S	Not a white space character.
\xHH An encoded hexadecimal character value. \z The end of the string.	\w	A word ("C" identifier) character.
\z The end of the string.	\W	Not a word character.
The order are carried.	\xHH	An encoded hexadecimal character value.
\Z The end of the string or line.	\ Z	The end of the string.
	\Z	The end of the string or line.

Grouping:

abz	Sequence: Expressions a through z in sequence.
a b z	Alternation: One and only one of a or b or etc
(e)	An unnamed group. Also acts as an operator precedence modifier.
(? <name>)</name>	Define a named sub-group. Typically tagged with {0}, see below.
\g <name></name>	Invoke an named sub-group.
[]	Any character from the set of characters in the brackets.
[^]	Any character not in the set of characters in the brackets.

Set Special Keys:

\] \\ \/ \-	A "]", "\", "/", or "-" character.
a-z	A character range.
\b	A backspace (0x08) character (inside a [] only).

Repetition:

	•
r*	Matches r zero or more times.
r*?	Matches r zero or more times (non-greedy).
r+	Matches r one or more times.
r+?	Matches r one or more times (non-greedy).
r?	Matches r zero or one times.
r{M,N}	Matches r M through N times.
r{M,N}?	Matches r M through N times (non-greedy).
r{M,}	Matches r M or more times.
r{,N}	Matches r zero through N times.
r { N }	Matches r exactly N times.

Peeking Outward:

(?=)	A positive look ahead, not part of the match.
(?!)	A negative look ahead, not part of the match.
(?<=)	A positive look behind, not part of the match.
(?)</th <th>A negative look behind, not part of the match.</th>	A negative look behind, not part of the match.

Usage:

pos = regex =~ string #\$PREMATCH \$MATCH \$POSTMATCH
md = regex.match(string) #md.pre_match md.to_s md.post_match
#md[number] fetches the value of an unnamed sub-group.
#md[name] fetches the values of any named sub-groups.

Never forget: irb, http://rubular.com/, and http://rubular.com/, and http://teuthida-technologies.com/
